

Contractors love the ease of Bandit's latest handle-bar stump grinder

Contractors looking for a lightweight grinder that is easy to manoeuvre in tight locations should look no further. Bandit's latest handlebar grinder, the HB20 SideWinder, is compact and powerful enough to tackle stumps that are difficult to reach with larger stump grinders.

The HB20 SideWinder is powered by a 20HP Kohler Command engine and features a centre pivot swing action allowing the user to keep the wheels stationary while using a smooth gliding motion back and forth to easily grind stumps.

The HB20 SideWinder has the widest swing arc in the industry so you can tackle the biggest stumps without re-positioning the machine. It has a cutting depth of 56cm and height of 61cm.

A unique single lever for one-handed forward/reverse travel control makes it a lot easier to manage than the difficult to use two-lever arrangement found on other machines. The height adjustable handlebar makes it more comfortable to use when cutting tall stumps or digging deep into the stump hole. The SideWinder also features a storage/travel position for the handle bar so it can be transported easily on the back of a small ute.

Other features include an electric start engine, electric clutch, hour meter, emergency dead-man shut down control and a class leading 19 litre capacity steel fuel tank.

The best news is that the machine is built by Bandit, so you are guaranteed excellent build quality and Spare Parts Support with the back-up of Bandit's excellent Dealer Network.
