

Tomahawk™ Teeth: **Features**

Tomahawk™ Teeth are the fastest cutting teeth on the market. They have been proven effective on machines exceeding 180 HP. Tomahawk™ Teeth are recommended for customers who are looking for convenience, increased strength and speed. Also, beneficial on smaller machines (25 HP) by increasing the cutting efficiency.

Compound Angle

Radical angles ensure fastest cuts, maximum strength and longer lasting sharpness.

Carbide Tip

Thicker than industry standard, we utilize the highest quality American-Made Carbide available in the industry. With greater impact resistance, the Tomahawk™ Tooth is the best balanced tooth on the market.

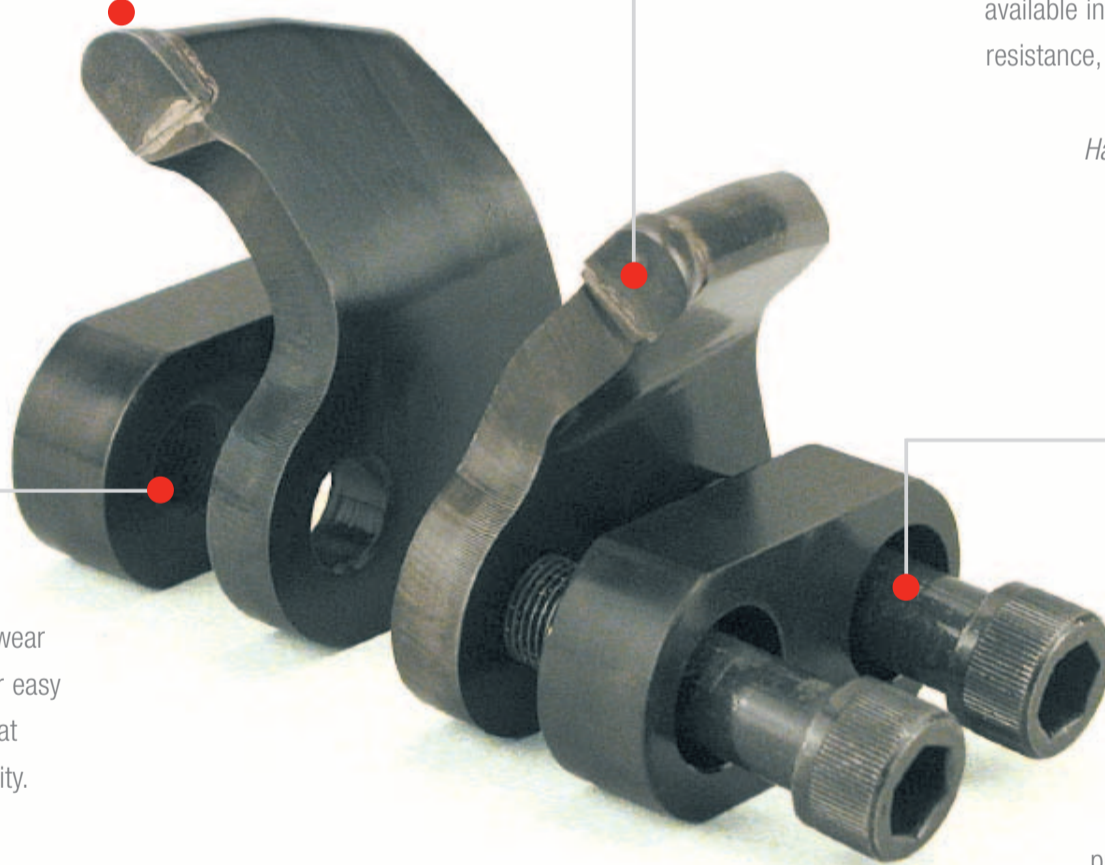

Hard carbide tip available for sandy or clay ground conditions.

Mounting Block

Uniquely designed and styled, the mounting block decreases wear and tear on bolts and allows for easy installation on all machines. Heat treated for strength and durability.

Bolts

Leonardi Bolts are specially designed to limit thread, head, and wheel damage. Shorter, sunken bolts keep both bolt ends protected, while the longer, smooth shank (which provides more surface area) reduces wheel damage by preventing bolt and hole distortion.

Tomahawk™ Teeth: **Benefits**

Cutting Rate and Strength

Tomahawk™ Teeth boast the highest performance both in cutting rate and strength.

Why? The Tomahawk™ Teeth's uniquely designed double cutting angle provides strength and durability by slicing through stumps rather than pounding your equipment.

Installation

Tomahawk™ Teeth install in under one minute.

Why? The simple construction of Tomahawk™ Teeth and mounting block eliminate the need for gauging and teeth set-up, which saves time on the job.

Cross-Over Configurations

Tomahawk™ Teeth come in interchangeable Left, Straight and Right teeth, allowing for Cross-Over Configurations, which are recommended in all wheel set-ups. There are no special teeth or set-ups required with Leonardi teeth.

Why? Cross-Over Configurations allow for plunge cutting, which is optimal for efficient stump removal in difficult or confined job environments (buildings sidewalks, sheds, curbs, etc.).

The Mounting Block

Tomahawk™ Teeth come in interchangeable Left, Straight and Right teeth, allowing for Cross-Over Configurations, which are recommended in all wheel set-ups. There are no special teeth or set-ups required with Leonardi teeth.

Why? This allows for quick and easy interchangeability of hardware, enabling faster replacement of teeth in the field and greater efficiency on the job – bolts can be installed from either side of the wheel wherever there are minimal obstructions (drive unit, guards, pulleys, etc.).
